}
else
{
printf("\n both are not equal");
}
printf("\n -- both occurrence --");
printf("\n first occurrence = %s", strchr(s1, 'a'));
printf("\n last occurrence = %s", strrchr(s1, 'a'));
getch();
}

```

Save - click F2 to save it with .c extension.

Compile - click Alt+F9 to compile, rectify the errors if any

Program 92:

String c

Write a C program using ^{all} string handling Functions.

Aim: To write a C program using all string handling Functions

Resources Required: A PC with MS TurboC++ program:

```
#include <stdio.h>
#include <conio.h>
#include <string.h>
void main ()
{
    char s1[30], s2[30], s3[30];
    clrscr();
    printf("\n enter a string");
    scanf("%s %s", &s1, &s2);

    printf("\n --- length of the string --- ");
    printf("\n length of %s = %d", s1, strlen(s1));
    printf("\n length of %s upto 3 = %d", s1, strlen(s1, 3));
    printf("\n --- Case --- ");
    printf("\n %s in Upper Case = %s", s1, strupr(s1));
    printf("\n %s in lower Case = %s", s1, strlwr(s1));
    printf("\n --- Appending --- ");
    printf("\n added text = %s", strcat(s1, s2));
    printf("\n n added text = %s", strncat(s1, s2, 8));
    printf("\n --- copying --- ");
    printf("\n copied text = %s", strcpy(s3, s2));
    printf("\n n copied text = %s", strncpy(s3, s2, 5));
    printf("\n --- comparing.... ");
    if (strcmp(s3, s2) == 0)
```

Execute; Click ctrl+q to execute the program.

Output:

MSDOS Box 0.74

```
enter a String: Rohan Reddy
--- length of the String ---
length of Rohan = 5
length of Rohan upto 3 = 3
--- Case ---
Rohan in upper Case = ROTAN
Rohan in lower Case = rohan
--- appending ---
added text = RohanReddy
n added text = RohanReddyRed
--- Copying ---
Copied text = Reddy
n Copied text = Red
--- Comparing ---
both strings are equal
--- Comparing with ignoring Case ---
both strings are equal excluding cases
--- Comparing with n characters ---
both are equal
--- Occurrence ---
First Occurance = an Reddy Red
last Occurance = an Reddy Red
```
